Response to Editor 1

Joint Evidence Gating for Continual Maintenance of Predictive Digital Twin Models Under Unreliable Monitoring

Computers, Materials & Continua

Dear Editor 1,

Thank you for your comments. Below we answer each point, summarize the relevant evidence and identify its location in the revised Clean manuscript. Supplement references refer to the accompanying Supplementary Protocol and Results.

E1.1

Comment. Figure 5 is not cited in the main text. Please add an appropriate in-text citation to Figure 5 at the relevant location.

Response. The text explicitly cites the current benign-evolution Figure 5 and Table 4. Figure 5(a) compares clean lifecycle MSE for Always-FT, Joint and Frozen; panel(b) reports Joint commitment and beneficial-candidate recall, using method-specific candidate-chain denominators.

Changes in the revised manuscript. Section 5.2.3 (p. 10); Table 4 (p. 11); Figure 5 (p. 11).

E1.2

Comment. Section 4.1.1: Please verify the accuracy and completeness of the information provided in Reference [32] and make corrections if necessary.

Response. The corrected entry identifies the Alibaba Open Cluster Trace Program, Cluster Trace v2018, and its official documentation. The dataset description distinguishes the full provider trace from the 40 previously exposed machines evaluated here.

Changes in the revised manuscript. Section 5.1.1 (p. 7). Corrected Alibaba dataset entry in the Clean References.
